### MC KENZIE

Mc Kenzie, which is particularly well-known for its line of 3D targets, offers a complete line of training targets.

#### Blockbuster

Target made up of synthetic material, size 50x40x28 cm. Easy to transport and with an excellent durability, it excels for the easyness with which the arrow can be pulled out.

**Code 53A571**

#### Carbon Block CB 18

Cube of pressed foam. It can be used on each of the four sides, assuring this way an high durability. It can be used with broadheads. Size 45x45x40 cm.

**Code 537244**

#### Tuff Block

Target for specific use with broadheads, size 61x61x30 cm.

**Code 535844**

#### Backyard

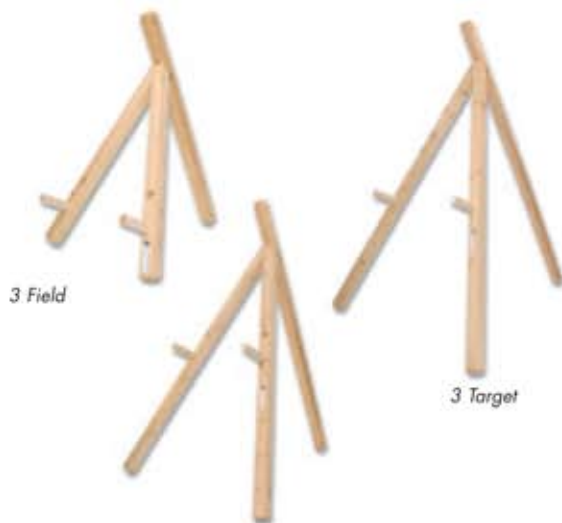

Layered target, ideal for private use. Excellent resistance against penetration and incredible ease of arrow-extraction.

**Code 53A570**

### STRAW TARGETS

Classic straw targets. They are widely used on the competition fields. They are characterized by an affordable price.

According to Booster a target mat is a real target mat only if it both stops the arrow and preserves the arrow itself. According to Booster a target can't be considered a target mat if, although it fulfills one of its two aims, it damages the arrow - even if not seriously - with an abrasive action that progressively changes the weight and spine properties.

Booster believes that the targets of the new Competition line perfectly interpret the idea of what a target mat should be. Thanks to the use of high density foam and of other technologies, these targets are able to assure an optimum durability (more than a straw target), an interchangeable core (which allows a further improvement in the life of the target itself) and a total stability under the most different weather conditions. Booster Competition target has been used with success at the Olympic Games and at the World Championships and it represents an optimum choice for all clubs and individual archers.

### BOOSTER COMPETITION TARGET MATS

Booster's Competition Target line is offered in four different sizes: 60, 75, 90 and 132 cm. The 132 cm version allows you to change the inner core (60 cm) extending this way the durability of the target at a reduced cost. The 132 cm size is available also in the Plus version that offers an even stronger inner core.

### ARROW LUBRICANT

For all high density foam targets we suggest the use of an arrow lubricant, in order to facilitate the removal of the arrows from the target.
